The subject matters of claims 1-6 appear to be novel and to involve an inventive step in view of the above-listed documents cited in the ISR. The above-listed documents do not describe a purification method of purifying 2-chloro-5-chloromethyl-1,3-thiazole by distillation, wherein a crude product is treated with a lower alcohol beforehand, and it could not be easily conceived by a person skilled in the art from the methods of the above-listed documents that a product excellent in yield and purity can be obtained by the purification method.

WRITTEN OPINION OF THE
INTERNATIONAL SEARCHING AUTHORITY

International application No.

PCT/JP2005/004181

Box No. VIII Certain observations on the international application

The following observations on the clarity of the claims, description, and drawings or on the question whether the claims are fully supported by the description, are made:

Concerning the purification method of claims 1-6, disclosed in the specification is a method in which a solvent is distilled away from a reaction solution obtained by reacting 2-halogenoallyl isothiocyanate with a chlorination agent, a lower alcohol is then added, and the resultant mixture is further heated and stirred, and the distilled.

In the synthesis reaction, byproducts present in a reaction solution vary depending on raw materials used, and therefore a person skilled in the art cannot understand that a product excellent in yield and purity can be obtained by the same purification method even when the raw material is different, and it can be understood that if a solvent is added to a reaction solution (or its residue) and the resultant mixture is heated and stirred for a fixed amount of time as in the method described in this specification, the reaction further proceeds if an unreacted raw material or the like exists. Therefore, the descriptions of the claims which do not encompass include matters that are not disclosed in the specification of this application.
